Feature Roadmap for OpportunityFinder AI

Version 1 Features

1. **Student Profile Setup:** Students enter their grades, interests, location, and goals when they sign up. This is important because the app needs this information to match each student with opportunities that fit them.
2. **Scholarship Finder:** Students search for scholarships and get AI recommendations based on their profile. This is important because it is the core feature that solves the app's main problem of students not knowing where to find funding.
3. **Study Abroad Opportunities:** Students browse international study and exchange programs, including ones with financial assistance. This is important because it sets the app apart from a basic scholarship search and shows students that global experiences are within reach.
4. **AI Opportunity Assistant:** Students ask questions and get simple answers and clear next steps. This is important because it gives first-generation students the guidance, they might not get anywhere else.
5. **Application Tracker:** Students save opportunities, organize requirements, and track deadlines. This is important because finding an opportunity only helps if the student applies on time.
6. **Educational Resources:** Students read starter guides on college prep, essay writing, and financial aid. This is important because many students need help preparing strong applications, not just finding opportunities.
7. **Official Links, Eligibility, and Deadlines on Every Listing:** Each listing links to the official application site and clearly shows its requirements and deadline, with a note that AI recommendations do not guarantee funding. This is important because students rely on accurate information, and it makes the app trustworthy.

Future Features

1. **Personalized Notifications:** Reminders about new scholarships, upcoming deadlines, and study abroad applications.
2. **College Matching:** AI recommends colleges based on a student's interests, academic goals, and financial needs.
3. **Essay Helper:** An AI writing assistant helps students brainstorm and improve their essays.

4. **Mentorship Program:** Students connect with college students, graduates, and other mentors.
5. **Career Opportunities:** Internships, volunteer programs, summer programs, and jobs.
6. **Multiple Language Support:** The app is available in several languages so students and families who speak other languages can use it. (new idea)
7. **Financial Aid Calculator:** Students estimate college costs and see how scholarships could reduce them. (new idea)
8. **Parent and Counselor Sharing:** Students can share saved opportunities and deadlines with a parent, teacher, or school counselor for extra support. (new idea)

The features may change depending on how successful version 1 is. A way I will see which features students will prefer I will conduct a random sample survey and ask student what they would prefer in an app that will help them for Opportunities.
